OPTI-BRIGHT ALLOY WHEEL CLEANER

Opti-Bright Wheel Cleaner has been developed using a powerful innovative acid free formulation. The innovative formulation has been developed with once sole purpose in mind - to clean and remove stubborn brake dust and contamination from heavily soiled wheels.

Once applied via spraying onto the wheel surface, Opti-Bright Wheel Cleaner penetrates deep into the contamination releasing it from the surface which it was once bonded to.

The formulation is completely acid free, this reduces the risk of damage to wheels when cleaning. Spray, wipe and rinse, the wheels will be transformed back to their original finish.

How To Use?

Always test on an inconspicuous area of the wheel before use. Simply spray on the Opti-Bright Alloy Wheel Cleaner onto the wheel. Allow a few seconds for the cleaner to penetrate the soiled surface and then agitate the surface using a wheel brush or cloth.

Finally, rise the surface with a lot of water before the formulation has time to dry. Once the formulation and dirt has been rinsed of the wheel buff the surface dry with a microfibre cloth. Please wear protective detailing gloves while using Opti-Bright Wheel Cleaner.
